Data in Many Forms . . .

Statistics Canada disseminates data in a variety of forms. In addition to publications, both standard and special tabulations are offered. Data are available on CD, diskette, computer print-outs, microfiche and microfilm, and magnetic tapes. Maps and other geographic reference materials are available for some types of data. Direct on line access to aggregated information is possible through CANSIM, Statistics Canada's machine-readable data base and retrieval system.

How to Obtain More Information

Inquiries about this table and related statistics or services should be directed to:

Information Requests Section,
Canadian Centre for Health Information,

Statistics Canada, Ottawa, K1A 0T6 (Telephone: 951-1746) or to the Statistics Canada reference centre in:

| | |
|-----------------------------|----------------------|
| St. John's (1-800-565-7192) | Winnipeg (983-4020) |
| Halifax (426-5331) | Regina (780-5405) |
| Montreal (283-5725) | Edmonton (495-3027) |
| Ottawa (951-8116) | Calgary (292-6717) |
| Toronto (973-6586) | Vancouver (666-3691) |

Toll-free access is provided in all provinces and territories, **for users who reside outside the local dialing area** of any of the regional reference centres.

Des données sous plusieurs formes . . .

Statistique Canada diffuse les données sous formes diverses. Outre les publications, des totalisations habituelles et spéciales sont offertes. Les données sont disponibles sur disque compact, disquette, imprimés d'ordinateur, microfiches et microfilms et bandes magnétiques. Des cartes et d'autres documents de référence géographiques sont disponibles pour certaines sortes de données. L'accès direct à des données agrégées est possible par le truchement de CANSIM, la base de données ordnolingue et le système d'extraction de Statistique Canada.

Comment obtenir d'autres renseignements

Toute demande de renseignements au sujet de ce tableau ou de statistiques et services connexes doit être adressée à la:

Section des demandes d'information,
Centre canadien d'information sur la santé,

Statistique Canada, Ottawa, K1A 0T6 (téléphone: 951-1746) ou au centre de consultation de Statistique Canada à:

| | |
|-----------------------------|----------------------|
| St. John's (1-800-565-7192) | Winnipeg (983-4020) |
| Halifax (426-5331) | Regina (780-5405) |
| Montréal (283-5725) | Edmonton (495-3027) |
| Ottawa (951-8116) | Calgary (292-6717) |
| Toronto (973-6586) | Vancouver (666-3691) |

Un service d'appel interurbain sans frais est offert, dans toutes les provinces et dans les territoires, **aux utilisateurs qui habitent à l'extérieur des zones de communication locale** des centres régionaux de consultation.

Note of Appreciation

*Canada owes the success of its statistical system to
a long-standing cooperation involving Statistics
Canada, the citizens of Canada, its businesses and
governments. Accurate and timely statistical
information could not be produced without their
continued cooperation and goodwill.*

Note de reconnaissance

*Le succès du système statistique du Canada repose
sur un partenariat bien établi entre Statistique Canada
et la population, les entreprises et les administrations
canadiennes. Sans cette collaboration et cette bonne
volonté, il serait impossible de produire des statistiques
précises et actuelles.*

INTRODUCTION

This publication is a compilation of historical data relating to the demographic aspects of death data for Canada, the 10 provinces, and the two territories from 1921 to 1990. Major topics included in this publication relate to: the numbers and rates of deaths, age-specific and age-standardized death rates, mean and median age of decedents, deaths by age, sex, and marital status, natural increase of the population and rates, and life expectancy. This publication contains the following sections: (a) a narrative description of Canada's death data, supplemented by a number of charts depicting levels and trends of mortality indicators; (b) a set of statistical tables containing historical death data since 1921. The statistical data in this publication, along with complete documentation, would shortly be available in machine readable form from the Canadian Centre for Health Information.

This publication was compiled in the Health Status Section of the Canadian Centre for Health Information and is one in a series of historical publications relating to the vital statistics events of births, marriages, divorces, deaths, infant and perinatal deaths, and abortions. The project was co-ordinated by Surinder Wadhera, Senior Analyst and Jill Strachan, Research Analyst. Mr. Wadhera can be contacted (613-951-3415) for further information relating to this publication.

La présente publication réunit des données historiques sur les aspects démographiques de la mortalité au Canada, dans les dix provinces et les deux territoires, de 1921 à 1990. Parmi les principaux sujets traités, on retrouve le nombre de décès, les taux de mortalité par groupe d'âge et taux comparatifs de mortalité, les âges moyen et médian au décès, les décès selon l'âge, le sexe et la situation matrimoniale, l'accroissement naturel de la population et le taux d'accroissement, et l'espérance de vie. La publication est divisée en deux sections. La première renferme une description des données sur la mortalité au Canada, accompagnée d'un certain nombre de graphiques illustrant les niveaux et les tendances des indicateurs de la mortalité, alors que la seconde comprend une série de tableaux statistiques où se trouvent les données sur la mortalité depuis 1921. Les données statistiques présentées ici, accompagnées d'une documentation complète, seront offertes bientôt sur support exploitable par une machine par le Centre canadien d'information sur la santé.

La publication a été rédigée par le personnel de la Section de l'état de santé du Centre canadien d'information sur la santé. Elle fait partie d'une série de publications historiques sur les événements de l'état civil que sont les naissances, les mariages, les divorces, les décès - dont les décès d'enfants de moins de un an et les décès périnataux - et les avortements. La coordination de la publication a été assurée par Surinder Wadhera, analyste principal, et Jill Strachan, analyste de recherche. Pour en savoir davantage sur cette publication, communiquer avec Mr. Wadhera (613-951-3415).

METHODOLOGICAL NOTES

This report presents selected mortality data for Canada, the ten provinces, and the two territories dating back to 1921. The tabulations mainly relate to the numbers and rates of deaths for various geographical jurisdictions, age-specific and age-standardized death rates for males and females, mean and median age at death, deaths by age, sex and marital status, natural increase of the population and rates, life expectancy, numbers and rates of maternal deaths and infant deaths. The source of death data included in this publication is the Canadian System of Vital Statistics which registers live births, marriages, deaths, and stillbirths in the ten provinces and two territories of Canada. These registrations are recorded and accumulated by registrars of vital statistics in each province and territory. The term province in the titles of the statistical tables in this publication refers to the ten provinces and the two territories unless specified otherwise.

Mode of Data Availability

The births, marriages, deaths, and stillbirths data for Newfoundland, Prince Edward Island, Nova Scotia, New Brunswick, and the Yukon and Northwest Territories, are transformed into machine readable form at Statistics Canada. Data from other provinces are supplied in machine readable form by the provincial registrars of vital statistics. Editing and processing of data to generate the necessary tabulations are accomplished by means of specialized programs developed at Statistics Canada.

Mode of Dissemination

For the data year 1987 and following years, death data are included in the Standard Tables published by the Canadian Centre for Health Information at Statistics Canada. Similar documents relating to data on births, marriages, divorce, and causes of death for the same period

NOTES MÉTHODOLOGIQUES

Le présent rapport renferme des données choisies sur la mortalité au Canada, dans les dix provinces et les deux territoires, qui remontent jusqu'à 1921. Les tableaux portent surtout sur le nombre de décès et les taux de mortalité pour différentes régions géographiques, les taux de mortalité par âge et les taux comparatifs de mortalité pour l'homme et pour la femme, l'âge moyen et l'âge médian au décès, les décès selon l'âge, le sexe et la situation matrimoniale, l'accroissement naturel de la population et les taux d'accroissement, l'espérance de vie, le nombre de morts maternelles et les taux de mortalité maternelle, et les décès de moins de un an. La source des données sur la mortalité présentées ici est le Système canadien de statistiques de l'état civil où sont enregistrés les naissances vivantes, les mariages, les décès et les mortinaissances observés dans les dix provinces et les deux territoires du Canada. Ces événements sont cumulés par les secrétaires de l'état civil de chaque province et territoire. Le terme «provinces» dans les titres des tableaux statistiques de la publication fait référence, sauf indication contraire, aux dix provinces et aux deux territoires.

Mode de disponibilité des données

Les données sur les naissances, les mariages, les décès et les mortinaissances pour Terre-Neuve, l'Île-du-Prince-Édouard, la Nouvelle-Écosse, le Nouveau-Brunswick, le Yukon et les Territoires du Nord-Ouest sont mises sur support exploitable par une machine par Statistique Canada. Les données des autres provinces sont fournies directement sur support exploitable par une machine par les bureaux provinciaux de l'état civil. La vérification et le traitement des données nécessaires à la mise en tableaux sont réalisés au moyen de programmes spécialisés conçus par Statistique Canada.

Mode de diffusion

Pour l'année étudiée 1987 et les années suivantes, les données sur la mortalité sont présentées dans des tableaux normalisés publiés par le Centre canadien d'information sur la santé de Statistique Canada. Des documents semblables renfermant des données sur les

are also available. Tabulations on births, marriages, and deaths from 1975 to 1986 were published in the following four annual reports:

Catalogue Title

| | |
|--------|------------------------------------|
| 84-203 | Causes of Death |
| 84-204 | Births and Deaths |
| 84-205 | Marriages and Divorces |
| 84-206 | Mortality - Summary List of Causes |

Similar information for 1974 and prior years is available through a single report, Vital Statistics Catalogue 84-202.

Limitations of Data

Complete vital statistics data back to 1921 are not available for all regions. For Newfoundland prior to 1949, and the Territories prior to 1950, only total counts were extracted from provincial and territorial reports. Similarly, for 1921-1925, total counts for Quebec were extracted from Department of Health reports.

Various limitations of the data have been observed for some of the cross-classifications required for the tabulations. These limitations, as much as possible, are enumerated in the footnotes of the tables. Users are advised to look carefully at the footnotes to each tabulation and keep the data limitations in mind when analyzing and interpreting the levels and trends.

Infant deaths given in Table 4 for 1921 to 1949 will not match figures given in Table 11 because Table 4 does not include data for Newfoundland prior to 1949, Quebec from 1921 to 1925, and the Yukon and Northwest Territories prior to 1950.

Prior to 1944 all vital events were classified by place of occurrence. Since 1944, births, stillbirths, and deaths have been classified by area of reported residence, with births and stillbirths according to the residence of the mother. For 1990, it was not possible to completely edit vital statistics data reported by the province of Ontario.

naissances, les mariages, les divorces et les causes de décès pour la même période sont également offerts. Des tableaux sur les naissances, les mariages et les décès pour 1975 à 1986 sont publiés dans les quatre rapports annuels suivants:

N° au Titre catalogue

| | |
|--------|---------------------------------------|
| 84-203 | Causes de décès |
| 84-204 | Naissances et décès |
| 84-205 | Mariages et divorces |
| 84-206 | Mortalité - Liste sommaire des causes |

Des renseignements semblables pour 1974 et les années précédentes sont présentées dans un rapport unique intitulé *Statistique de l'état civil*, n° 84-202 au catalogue.

Limites des données

Des données complètes de la statistique de l'état civil remontant jusqu'à 1921 ne sont pas disponibles pour toutes les régions. En effet, seuls des comptes totaux ont été extraits des rapports provinciaux et territoriaux pour les années précédant 1949 dans le cas de Terre-Neuve et les années antérieures à 1950 dans le cas des territoires. De même, pour 1921 à 1925, des comptes totaux pour le Québec ont été extraits des rapports du ministère de la Santé.

Diverses limites concernant les données sont observées pour certains classements recoupés nécessaires aux tableaux. Ces limites, dans la mesure du possible, sont énoncées dans les notes en bas des tableaux. On conseille aux utilisateurs de lire attentivement les notes accompagnant chaque tableau et d'avoir à l'esprit ces limites lorsqu'ils analysent et interprètent les niveaux et les tendances.

Les données sur les décès d'enfants de moins de un an qui figurent au tableau 4 pour les années 1921 à 1949 ne correspondent pas aux chiffres du tableau 11, le tableau 4 ne comprenant pas les données pour Terre-Neuve avant 1949, celles du Québec entre 1921 et 1925, ni celles du Yukon et des Territoires du Nord-Ouest avant 1950.

Avant 1944, tous les événements de l'état civil étaient classés selon le lieu où ils survenaient. Depuis 1944, les naissances, les mortinaissances et les décès sont classés selon le lieu de résidence déclaré et les naissances et mortinaissances, selon le lieu de résidence de la mère. En 1990, les données déclarées par

When performing edit checks, invalid codes were changed to "unknown" categories and unlikely situations were accepted as reported.

Quality of Data

Because of the obligatory legal requirement to register vital events in all provinces in Canada, the level of coverage and quality of the statistical data are high. There may, however, exist some small regional differences due primarily to the delayed registrations, which are received beyond the cut-off date. The overall effect of these on the statistical measures and tabulations shown in this report is negligible.

A quality assessment study was carried out on a sample of 1981 records. A stratified sampling procedure, representing different modes of data availability for processing, was adopted for selecting the sample. The main aspect studied in this round of enquiry was the measurement of the processing errors based on the sample records of births and deaths, which were independently processed and compared with the production records on the clean database. A number of core characteristics were investigated relating to deaths. These included marital status, age sex, birth date, place of death, date of death, autopsy and date of certification. The details of the study can be obtained from Health Status Section, Canadian Centre for Health Information.

L'Ontario n'ont pu être entièrement vérifiées. Lors des vérifications, les codes invalides ont été attribués aux catégories «inconnues» et les situations improbables ont été acceptées telles qu'elles avaient été déclarées.

Qualité des données

En raison des lois rendant obligatoire l'enregistrement des événements de l'état civil dans toutes les provinces canadiennes, le niveau de couverture et la qualité des données statistiques sont élevés. Il peut cependant exister de légères différences régionales attribuables principalement aux enregistrements en retard, qui sont reçus après la date limite. Les répercussions globales de ces retards sur les tableaux et les mesures statistiques du présent rapport sont négligeables.

Une étude d'évaluation de la qualité a été réalisée sur un échantillon d'enregistrements de 1981. Une méthode d'échantillonnage stratifié, représentant différents modes de disponibilité des données pour le traitement, a été choisie pour le tirage de l'échantillon. Le principal aspect étudié durant cette étude était la mesure des erreurs de traitement observées dans l'échantillon d'enregistrements de naissances et de décès, qui font l'objet d'un traitement indépendant et sont comparés avec les enregistrements de production dans la base de données épurées. Un certain nombre de caractéristiques essentielles ont été examinées pour les décès, dont la situation matrimoniale, l'âge, le sexe, la date et le lieu de naissance, la date du décès, l'autopsie et la date du certificat de décès. Le lecteur désirant obtenir des renseignements plus détaillés sur cette étude peut s'adresser à la Section de la santé, Centre canadien d'information sur la santé.

TERMS AND DEFINITIONS

A summary of the definitions used in this publication is given below.

Population

De jure (resident) population as enumerated in census years or estimated for inter-censal years.

Deaths

Maternal: deaths due to delivery and complications of pregnancy, childbirth and the puerperium (Categories 630-676 of the 1975 International Classification of Disease).

Infant: deaths under one year of age.

Natural Increase

Excess of births over deaths.

Age

Completed age in years, months, etc.

Average: Arithmetic mean.

Median: Age above or below which half of the total events occur.

Rates or Ratios

Unless otherwise indicated, computed as follows:

Age-standardized death rate: Number of expected deaths per 1,000 standard population.

Crude death rate: Deaths per 1,000 population.

Infant death rate: Deaths under 1 year per 1,000 live births.

Life expectancy at birth: Expected number of year of life after birth.

Rate of natural increase of population: Births minus deaths per 1,000 population.

Maternal death rate: Maternal deaths per 10,000 live births.

TERMES ET DÉFINITIONS

Un résumé des définitions utilisées dans la présente publication paraît ci-dessous.

Population

Population résidente dénombrée aux années de recensement ou estimée aux années intercensitaires.

Mortalité

Maternelle: décès dus aux complications de la grossesse, de l'accouchement et des suites de couches (rubriques 630-676 de la *Classification internationale des maladies* de 1975).

Infantile: décès de moins de un an.

Accroissement naturel

Excédent des naissances sur les décès.

Âge

Âge en années, mois, etc.

Moyen: moyenne arithmétique.

Médian: âge au-dessus ou au-dessous duquel surviennent la moitié des événements.

Taux ou Ratios

Sauf indication contraire, il sont calculés ainsi:

Taux comparatif de mortalité: nombre attendu de décès pour 1,000 personnes de la population type.

Taux brut de mortalité: décès pour 1,000 habitants.

Taux de mortalité infantile: décès de moins de un an pour 1,000 naissances vivantes.

Espérance de vie à la naissance: Nombre prévu d'années de vie à la naissance.

Taux d'accroissement naturel de la population: Excédent des naissances sur les décès pour 1,000 habitants.

Taux de mortalité maternelle: Morts maternelles pour 10,000 naissances vivantes.

HISTORICAL PERSPECTIVE - MORTALITY PATTERNS, CANADA, 1921-1990**Background**

Information regarding deaths in Canada is made available through the Canadian System of Vital Statistics Registration in the 10 provinces and two territories. This system dates back to 1921 when a federal-provincial agreement was signed to this effect which marked the beginning of the registration of births (live births and stillbirths), marriages, and deaths across Canada. Based on copies of registrations from the provinces and territories, Statistics Canada generates numerous kinds of Vital Statistics for Canada, the provinces and territories to serve user needs.

Crude Death Rates Prior to 1921

Death data prior to 1921 are derived from the Census of Population. Typical of pioneer populations, Canada had high death rates in the mid-1800s. The estimated crude death rate ranged between 22 and 25 deaths per 1,000 population. Over the next 70 years the rate declined by over 40% from 22 during 1851-1861 to 13 during 1911-1921 (Table I).

Table I. Crude Death Rate, Canada, 1851-1921

PERSPECTIVE HISTORIQUE - ÉVOLUTION DE LA MORTALITÉ AU CANADA DE 1921 À 1990**Contexte**

Les renseignements concernant les décès au Canada sont obtenus par consultation du Système canadien de statistiques de l'état civil des dix provinces et des deux territoires. Ce système remonte à 1921, année où une entente fédérale-provinciale a été signée. Cette entente marquait le début de l'enregistrement des naissances (naissances vivantes et mortinaissances), des mariages et des décès au pays. Statistique Canada, à partir des copies des enregistrements des provinces et des territoires, produit de nombreux types de statistiques de l'état civil pour le Canada, les provinces et les territoires en vue de répondre aux besoins des utilisateurs.

Taux bruts de mortalité antérieurs à 1921

Les données sur les décès antérieures à 1921 sont tirées du Recensement de la population. Comme bien d'autres populations de pionniers, la population canadienne enregistre au milieu du 19^e siècle des taux élevés de mortalité. Le taux brut de mortalité estimé est compris entre 22 et 25 décès pour 1,000 habitants. Durant les 70 années suivantes, le taux régresse de plus de 40%, passant de 22 durant la décennie 1851-1861 à 13 durant la période 1911-1921 (tableau I).

Crude Death Rates 1921-1990

The total population of Canada increased by 188%, from 9 million in 1921 to over 26 million in 1990. The number of deaths increased 84% from 104,531 in 1921 to 191,973 in 1990, but the crude death rate decreased by 38%, from 11.6 deaths per 1,000 population in 1921 to 7.2 in 1990 (Table II and Chart 1).

Taux bruts de mortalité, 1921-1990

La population totale du Canada augmente de 188%, passant de 9 millions d'habitants en 1921 à plus de 26 millions en 1990. Le nombre de décès s'accroît de 84%, de 104,531 en 1921 à 191,973 en 1990. Toutefois, le taux brut de mortalité régresse de 38%, passant de 11.6 décès pour 1,000 habitants en 1921 à 7.2 en 1990 (tableau II et graphique 1).

Table II. Total Population, Registered Deaths and Death Rates, Canada, 1921-1990
Tableau II. Population totale, décès enregistrés et taux de mortalité, Canada, 1921-1990

| Year | Total population (000's) | Registered deaths | Crude death rate per 1,000 population |
|-------|---------------------------|-------------------|---|
| Année | Population totale (000's) | Décès enregistrés | Taux brut de mortalité pour 1,000 habitants |
| 1921 | 9,051 | 104,531 | 11.6 |
| 1931 | 10,658 | 108,446 | 10.2 |
| 1941 | 11,339 | 118,797 | 10.1 |
| 1951 | 14,009 | 125,823 | 9.0 |
| 1961 | 18,238 | 140,985 | 7.7 |
| 1971 | 21,569 | 157,272 | 7.3 |
| 1981 | 24,196 | 171,029 | 7.0 |
| 1990 | 26,584 | 191,973 | 7.2 |

Source: *Statistique de l'état civil*, 1921 à 1969 (une publication par année), n° 84-202 au catalogue, Statistique Canada (anciennement Bureau fédéral de la statistique); *La statistique de l'état civil, rapport annuel préliminaire*, 1971 à 1974 (une publication par année), n° 84-201 au catalogue, Statistique Canada; *Naissances et décès, La statistique de l'état civil, Volume I*, 1975 à 1986 (une publication par année), n° 84-204 au catalogue, Statistique Canada; et *Naissances 1987-1990, Rapports sur la santé*, supplément n° 14, Statistique Canada.

Most of the decrease in the crude death rate occurred between 1941 and 1971 when the rate decreased from 10.1 to 7.3. The rate of decline was much slower over the next 13 years, decreasing from 7.3 in 1971 to 7.0 in 1984. It fluctuated between 7.2 and 7.3 over the next six years. The death rates for males and females followed patterns similar to the overall death rate, with fluctuations occurring in the rates of the 1920s and 1930s, followed by steady declines over the next four decades. Since the early 1980s, the death rate for males has remained relatively unchanged, fluctuating between 7.9 and 8.1 deaths per 1,000 males. The female death rate increased from about 6.1 in the early 1980s to

La plus grande partie de la baisse du taux brut de mortalité est observée entre 1941 et 1971, période où le taux passe de 10.1 à 7.3. Le taux de diminution est beaucoup plus lent au cours des 13 années suivantes: il passe de 7.3 en 1971 à 7.0 en 1984. Il se situe entre 7.2 et 7.3 durant les six années suivantes. Les taux de mortalité de l'homme et de la femme suivent une évolution semblable à celle du taux de mortalité générale, les taux fluctuant durant les années 20 et les années 30 puis régressant constamment durant les quarante années suivantes. Depuis le début des années 80, le taux masculin de mortalité demeure relativement inchangé, étant compris entre 7.9 et 8.1 décès pour 1,000 hommes. Le

about 6.5 deaths per 1,000 females in the mid to late 1980s. Since 1921, the death rate for females has been consistently lower than that for males (Chart 2).

Provincial and Territorial Crude Death Rates

For all provinces, the death rate was lower in 1990 than in 1921, particularly for the Maritime provinces, Quebec, and Ontario. During the 1920s and 1930s, the death rate was generally higher than the national death rate in the eastern provinces and lower in the western provinces. In the 1940s, Quebec and Ontario had death rates similar to the national rate, the Atlantic region and British Columbia had higher rates, and the Prairie provinces had lower rates. Over the next four decades, death rates for all provinces more closely approximated the national rate.

In 1921, the death rates ranged from 7.4 deaths per 1,000 population in Saskatchewan to 14.2 deaths per 1,000 in New Brunswick and Quebec. By 1990, the range had decreased substantially with Alberta registering the lowest death rate of 5.7 and Prince Edward Island the highest at 8.8 deaths per 1,000. Since 1950, Prince Edward Island, Nova Scotia, New Brunswick and British Columbia have had consistently higher rates than the national death rate, while Newfoundland, Quebec, and Alberta have had consistently lower rates (Chart 3a & 3b).

Death rates for the territories decreased substantially between the 1920s and the 1980s. In the 1980s, the death rates for the territories were the lowest in Canada. The rates for the territories should be interpreted with caution due to the small number of deaths.

Age-Standardized Death Rates

When crude death rates are compared over a period of time, difficulty arises in that while the death rate for each age group may remain constant, changes in the age composition of the population may bring changes in the overall rate of mortality. This factor may be offset by standardizing the rates, that is, by applying the death rates for each age group in each year to an arbitrary standard population, usually the actual population in one particular year. It can be

taux féminin de mortalité augmente, passant de 6.1 au début des années 80 à 6.5 décès pour 1,000 femmes durant la décennie. Depuis 1921, le taux féminin de mortalité est constamment inférieur à celui masculin (graphique 2).

Taux brut provinciaux et territoriaux de mortalité

Dans toutes les provinces, le taux de mortalité de 1990 est inférieur à celui de 1921, cette baisse étant particulièrement importante dans les Maritimes, au Québec et en Ontario. Durant les années 20 et 30, le taux de mortalité est généralement supérieur au taux national dans les provinces de l'Est et inférieur dans celles de l'Ouest. Dans les années 40, le Québec et l'Ontario ont des taux de mortalité semblables au taux national, les provinces de l'Atlantique et la Colombie-Britannique ont des taux supérieurs et les Prairies, des taux inférieurs. Durant les quatre décennies suivantes, les taux de mortalité de toutes les provinces se rapprochent beaucoup du taux national.

En 1921, les taux de mortalité sont compris entre 7.4 décès pour 1,000 habitants en Saskatchewan et 14.2 décès au Nouveau-Brunswick et au Québec. En 1990, l'écart s'est considérablement amenuisé, l'Alberta enregistrant le plus faible taux (5.7) et l'Île-du-Prince-Édouard, le plus élevé (8.8). Depuis 1950, l'Île-du-Prince-Édouard, la Nouvelle-Écosse, le Nouveau-Brunswick et la Colombie-Britannique ont toujours des taux supérieurs au taux national alors que Terre-Neuve, le Québec et l'Alberta ont constamment des taux inférieurs (graphiques 3a et 3b).

Les taux de mortalité des territoires régressent considérablement entre les années 20 et les années 80. Durant cette dernière décennie, les taux de mortalité des territoires sont les plus faibles au Canada. Il faut toutefois faire preuve de prudence dans l'interprétation de ces taux en raison du nombre restreint de décès.

Taux comparatifs de mortalité

La comparaison de taux bruts de mortalité sur une période de temps soulève des difficultés du fait que le taux de mortalité de chaque groupe d'âge peut demeurer constant alors que l'évolution de la répartition par âges de la population peut entraîner une évolution du taux de mortalité générale. On peut faire abstraction de ce facteur en appliquant les taux de mortalité pour chaque groupe d'âge de chaque année à une population type arbitraire, habituellement la

calculated what the overall death rate would have been in each year had the age and sex composition of the population remained constant over the whole period. [Dr. J. Cudmore, Vital Statistics 1969, Catalogue 84-202, Dominion Bureau of Statistics.] The age-standardized death rates (standardized to 1991 Canadian population) for total population, males and females, declined steadily. The mortality rates for females were lower and fell more rapidly than for males. Between 1951 and 1990, the age-standardized death rate for females declined 49.1% from 11.0 in 1951 to 5.6 in 1990. The rate for males decreased 31.4% from 14.0 in 1951 to 9.6 in 1990 (Table III). The age-standardized death rate for females in 1951 was about 21.4% lower than for males and due to a faster decline between 1951 and 1990, the female rate in 1990 was 41.7% lower than for males.

population réelle dénombrée une année donnée. On peut ainsi calculer ce que le taux de mortalité générale aurait été chaque année si la répartition par âge et par sexe de la population était demeurée constante tout au long de la période. [Voir J. Cudmore, *Statistique de l'état civil*, 1969, n° 84-202 au catalogue, Bureau fédéral de la statistique.] Les taux comparatifs de mortalité (fondés sur la population canadienne de 1991) pour l'ensemble de la population, hommes et femmes, diminuent régulièrement. Les taux féminins de mortalité sont inférieurs aux taux masculins et ils régressent plus rapidement. Entre 1951 et 1990, le taux comparatif féminin de mortalité diminue de 49.1%, passant de 11.0 en 1951 à 5.6 en 1990. Le taux masculin recule de 31.4%, passant de 14.0 en 1951 à 9.6 en 1990 (tableau III). Le taux comparatif féminin en 1951 est inférieur d'environ 21.4% à celui masculin, et comme il enregistre une baisse plus rapide entre 1951 et 1990, il est inférieur de 41.7% à celui masculin en 1990.

Table III. Death Rates and Median Ages at Death for Males and Females, Canada, 1951-1990

Death Rates by Marital Status and Age

In terms of marital status, the death rates for married people were lower than those for single persons and those who were widowed or divorced. The death rates for persons aged 65 years or over, still lowest for married persons, were higher for widowed and divorced persons compared to single persons. The death rates for males by age were higher than those of females irrespective of the marital status of the deceased. The percent decline in the death rates from 1951 to 1990 by marital status and ages of the deceased persons were as follow:

Taux de mortalité selon l'état matrimonial et l'âge

Lorsque l'état matrimonial est considéré, on constate que le taux de mortalité des personnes mariées est inférieur à celui des célibataires, des veufs ou des divorcés. Chez les personnes de 65 ans ou plus, le taux de mortalité le plus faible est observé chez les personnes mariées, et celui des personnes veuves ou divorcées est supérieur à celui des célibataires. Le taux masculin de mortalité par âge est supérieur à celui féminin quelle que soit l'état matrimonial du défunt. Les baisses en pourcentage des taux de mortalité selon l'état matrimonial et l'âge du défunt sont les suivantes pour la période comprise entre 1951 et 1990:

Table IV. Percent Decline in Death Rates by Marital Status of the Deceased Persons, Canada, 1951-1990**Tableau IV. Baisse en pourcentage du taux de mortalité selon la situation matrimoniale du défunt, Canada, 1951-1990**

For further details see table 7 in this publication.

Pour plus d'informations voir le tableau 7 de cette publication.

Infant Deaths

Since 1921, the number of infant deaths and the infant death rate (death under one year of age per 1,000 live births) decreased substantially. In 1921, one in 10 live births resulted in an infant death; by 1990 it was one in 146 live births. The number of infant deaths decreased by 90% from 27,051 deaths in 1921 to 2,766 in 1990. Similarly, the infant death rate decreased by 93% from 102.1 in 1921 to 6.8 deaths per 1,000 live births in 1990. The infant death rates for males and females followed similar trends, although the rate for females was generally lower than for males (Chart 4).

Mortalité infantile

Depuis 1921, le nombre de décès d'enfants de moins de un an et le taux de mortalité infantile (décès de moins de un an pour 1,000 naissances vivantes) régressent considérablement. En 1921, sur dix naissances, il y a un décès de moins de un an pour 146 naissances vivantes. Le nombre de décès de moins de un an diminue de 90%, passant de 27,051 décès en 1921 à 2,766 en 1990. De même, le taux de mortalité infantile recule de 93%, passant de 102.1 décès pour 1,000 naissances vivantes en 1921 à 6.8 en 1990. Les taux masculin et féminin de mortalité infantile suivent des tendances semblables bien que le taux féminin soit en général inférieur à celui masculin (graphique 4).

Maternal Deaths

The annual number of maternal deaths and maternal death rate have decreased substantially since 1921. Between 1921 and 1936, the number of maternal deaths fluctuated between 1,100 and 1,400. Since 1936, the number of maternal deaths decreased from 1,281 to 10 in 1990. The maternal death rate decreased from 56.2 deaths per 10,000 live births to 0.2 in 1990 (Chart 5).

Expectation of Life

Between 1921 and 1986, the expectation of life at birth increased by 19.1 years for females (79.7 years from 60.6 years) and by 14.2 years for males (73.0 years from 58.8 years). At age 65, according to latest data, females outlived males by 4.2 years - the expectation of life at that age is 19.1 years for females and 14.9 years for males (Table V and Chart 6).

In 1921, the median age at death was 43.5 years for females and 41.3 years for males. By 1990, it had increased to 78.2 years for females and 72.1 years for males. Between 1921 and 1941, for both males and females, the median age at death increased by 20 years. Between 1941 and 1961 females added nine years and males six years to their lives; whereas between 1961 and 1990, the median age at death for females increased by about six years and for males by over four years (Table III).

Mortalité maternelle

Le nombre annuel de morts maternelles et le taux annuel de mortalité maternelle diminuent considérablement depuis 1921. Entre 1921 et 1936, le nombre de morts maternelles est compris entre 1,100 et 1,400. Depuis, il régresse, passant de 1,281 en 1936 à 10 en 1990. Le taux de mortalité maternelle enregistre une baisse, passant de 56.2 décès pour 10,000 naissances vivantes à 0.2 en 1990 (graphique 5).

Espérance de vie

Entre 1921 et 1986, l'espérance de vie à la naissance augmente de 19.1 ans chez la femme (de 60.6 ans à 79.7 ans) et de 14.2 ans chez l'homme (de 58.8 ans à 73.0 ans). Selon les plus récentes données, à 65 ans, l'espérance de vie de la femme s'établit à 19.1 ans et celle de l'homme, à 14.9 ans, ce qui fait que la femme peut espérer à cet âge vivre 4.2 ans de plus que l'homme (tableau V et graphique 6).

En 1921, l'âge médian au décès s'établit à 43.5 ans chez la femme et à 41.3 ans chez l'homme. En 1990, il augmente pour se fixer à 78.2 ans chez la femme et à 72.1 ans chez l'homme. Entre 1921 et 1941, l'âge médian au décès, tant pour l'homme que pour la femme, augmente de 20 ans. Entre 1941 et 1961, la femme ajoute 9 ans à sa vie et l'homme, six ans. Enfin, entre 1961 et 1990, l'âge médian au décès pour la femme s'accroît d'environ six ans et pour l'homme, de plus de quatre ans (tableau III).

Table V. Expectation of Life at Birth and at Age 65 Years, Canada(1), Selected Years
Tableau V. Espérance de vie à la naissance et à 65 ans, Canada(1), certaines années

| Period - Période | At birth - À la naissance | | At age 65 years - À 65 ans | |
|------------------|---------------------------|----------------|----------------------------|----------------|
| | Male - Garçon | Female - Fille | Male - Homme | Female - Femme |
| 1920 - 1922 | 58.8 | 60.6 | 13.0 | 13.6 |
| 1940 - 1942 | 63.0 | 66.3 | 13.9 | 12.8 |
| 1960 - 1962 | 68.4 | 74.3 | 13.6 | 16.1 |
| 1980 - 1982 | 71.9 | 79.1 | 14.6 | 18.9 |
| 1985 - 1987 | 73.0 | 79.7 | 14.9 | 19.1 |

(1) Newfoundland not included in 1920-1922 and 1940-42 and Quebec not included in 1920-1922.

(1) Terre-Neuve n'est pas compris pour les périodes 1920-1922 et 1940-1942, ni le Québec, pour la période 1920-1922.

Death Rates - International Comparisons

In 1990, Canada's death rate of 7.2 was one of the lowest in the world. In Table VI death rates for 12 countries, with standards of living similar to Canada, are listed. Canada's rate was lower than ten of these countries and slightly higher than the rate for the two remaining countries.

Taux de mortalité - comparaisons internationales

En 1990, le taux de mortalité canadien, à 7.2, est l'un des plus faibles au monde. Le tableau VI illustre le taux de mortalité du Canada et celui de douze autres pays qui ont un niveau de vie semblable à celui du Canada. Le taux canadien est inférieur à celui de dix de ces pays et légèrement supérieur à celui de deux autres.

(1) In 1921 and 1922 the number of deaths for persons 30 years and over were grouped by 10 year age groupings.

(2) Figures do not include data for Newfoundland (1921-1949), Quebec (1921-1925) and the Yukon and Northwest Territories (1921-1950).

(3) Estimated.

(1) En 1921 et 1922, le nombre de décès chez les personnes âgées de 30 ans et plus était calculé pour des groupes d'âge de 10 ans.

(2) Les chiffres ne comprennent pas les données de Terre-Neuve (1921-1949), ni celles du Québec (1921-1925), ni celles du Yukon et des territoires du Nord-Ouest (1921-1950).

(3) Estimé.

(1) En 1921 et 1922, le nombre de décès chez les personnes âgées de 30 ans et plus était calculé pour des groupes d'âge de 10 ans.

(2) Les chiffres ne comprennent pas les données de Terre-Neuve (1921-1949), ni celles du Québec (1921-1925), ni celles du Yukon et des territoires du Nord-Ouest (1921-1950).

TABLE 5. Death Rates(1) by Sex and Age Group, Canada(2), Selected Years, 1921-1990

TABLEAU 5. Taux de mortalité(1) selon le sexe et le groupe d'âge, Canada(2), années choisies, 1921-1990

(1) Deaths per 1,000 population of same age.

(2) Data for Newfoundland not available prior to 1949, Quebec (1921-1925), Yukon and Northwest Territories prior to 1950.

(3) Number of deaths per 1,000 live births.

(4) Figures revised compared to those originally published in prior reports.

(5) Estimated.

MERCI DE VOTRE COMMANDE !

INTERESTED IN ACQUIRING A CANADIAN ORIGINAL?

Then **Canadian Social Trends** is the acquisition for you. A first on the Canadian scene, this journal is claiming international attention from the people who need to know more about the social issues and trends of this country.

Drawing on a wealth of statistics culled from hundreds of documents, **Canadian Social Trends** looks at Canadian population dynamics, crime, education, social security, health, housing, and more.

For social policy analysts, for trendwatchers on the government or business scene, for educators and students, **Canadian Social Trends** provides the information for an improved discussion and analysis of Canadian social issues.

Published four times a year, **Canadian Social Trends** also features the latest social indicators, as well as information about new products and services available from Statistics Canada.

CANADIAN SOCIAL TRENDS

(Catalogue No. 11-008E) is \$34 annually in Canada, US\$40 in the United States and US\$48 in other countries.

To order, write to Publication Sales, Statistics Canada, Ottawa, Ontario, K1A 0T6 or contact the nearest Statistics Canada Regional Reference Centre listed in this publication.

For faster service, fax your order to 1-613-951-1584. Or call toll free 1-800-267-6677 and use your VISA or MasterCard.

VOUS DÉSIREZ FAIRE L'ACQUISITION D'UNE OEUVRE ORIGINALE ?

Alors **Tendances sociales canadiennes** est la publication qu'il vous faut. Première en son genre sur la scène canadienne, cette revue retient l'attention des gens d'ici et d'ailleurs qui désirent en savoir plus sur les questions sociales de l'heure au pays.

À l'aide d'abondantes statistiques extraites de nombreux documents, **Tendances sociales canadiennes** brosse le tableau de la dynamique de la population canadienne, de la criminalité, de l'éducation, de la sécurité sociale, de la santé, de l'habitation et de plusieurs autres sujets.

Que ce soit pour les analystes de la politique sociale, les analystes des tendances oeuvrant au sein des administrations publiques et du monde des affaires, les enseignants ou encore les étudiants, **Tendances sociales canadiennes** dégage l'information nécessaire à des discussions et des analyses approfondies relativement aux questions sociales.

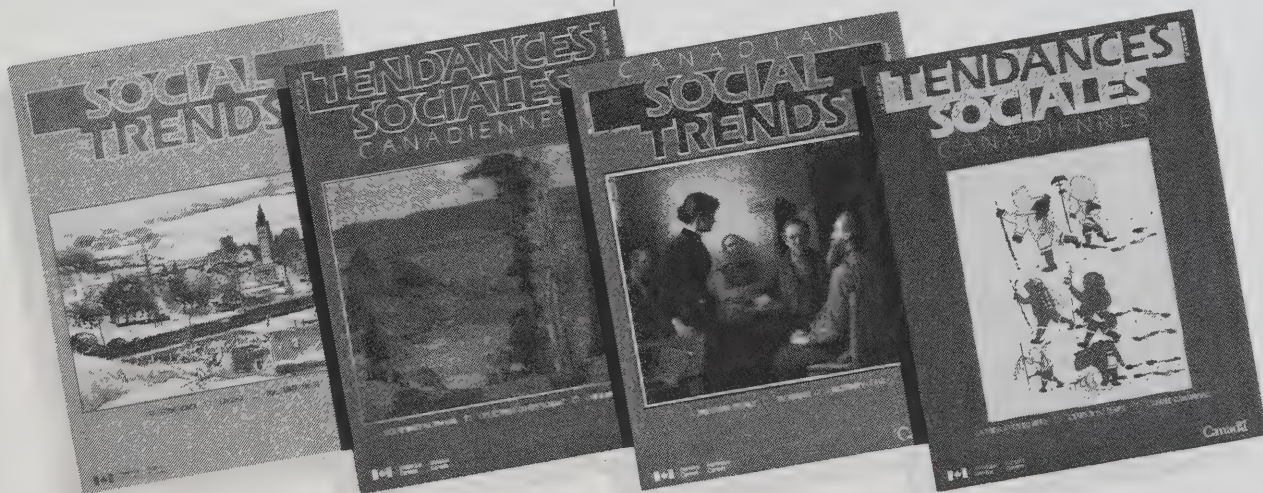

Tendances sociales canadiennes présente également les plus récents indicateurs sociaux de même que des renseignements relatifs aux produits et services qu'offre Statistique Canada.

TENDANCES SOCIALES CANADIENNES

Introducing

Health Reports

Statistics Canada's most frequently requested health information - now in one comprehensive quarterly journal

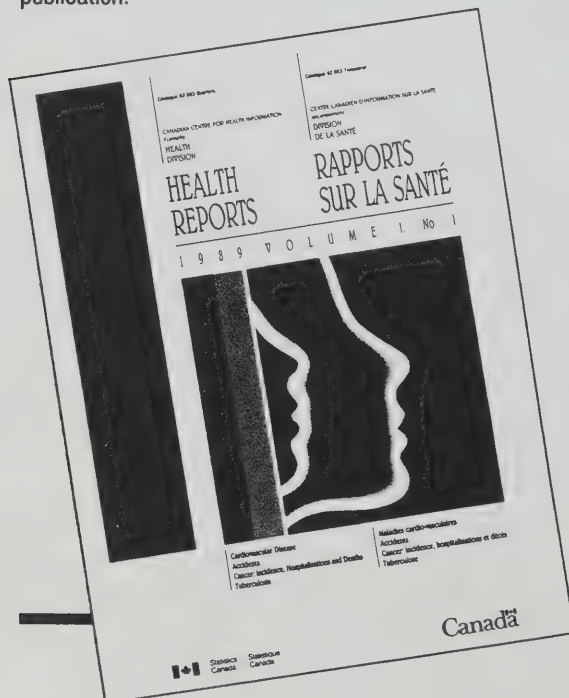

- **Feature Articles...** on key topics like the results of recent research on cancer, cardiovascular disease, etiology, and the socio-economic impact of health issues on Canadians
- **Highlights...** capsule summaries of the latest health data released by Statistics Canada
- **Selected Indicators...** to let you track and monitor important health trends on a national, regional or provincial level, including hospital indicators, mortality and morbidity statistics and national health levels

And, every issue of **Health Reports** includes a list of available information and sources to contact for specialized tabulations or custom data.

Be informed. Don't miss a single issue. Order your subscription today!

A subscription to **Health Reports** (Catalogue No. 82-003) is \$104 annually in Canada, US\$125 in the United States and US\$146 in other countries.

To order, write to: Publication Sales, Statistics Canada, Ottawa, Ontario, K1A 0T6, or contact your nearest Statistics Canada Regional Reference Centre, listed in this publication.

Nouveau !

Rapports sur la santé

Les renseignements sur la santé les plus demandés à Statistique Canada - maintenant disponibles dans une revue trimestrielle

- Des **articles de fond...** traitant les grands dossiers de l'heure : découvertes récentes sur le cancer, les affections cardio-vasculaires, l'étiologie et l'impact socio-économique des problèmes de santé sur les Canadiens.
- Des **faits saillants...** présentant un condensé des plus récentes données sur la santé publiées par Statistique Canada.
- Des **indicateurs choisis...** vous permettant de déceler et d'analyser les nouvelles tendances dans le domaine de la santé aux niveaux national, régional et provincial. Vous y trouverez, entre autres, les indicateurs des hôpitaux, de la mortalité et de la morbidité.

Chaque numéro de **Rapports sur la santé** comprend aussi une liste de renseignements et vous indique comment vous procurer des données personnalisées et des tableaux normalisés.

Soyez renseigné ! Ne ratez pas un seul numéro. Abonnez-vous dès aujourd'hui !

Un abonnement à **Rapports sur la santé** (n° 82-003 au catalogue) ne coûte que 104 \$ pour quatre numéros par an au Canada, 125 \$ US aux États-Unis et 146 \$ US dans les autres pays.

Pour commander, écrivez à : Vente des publications, Statistique Canada, Ottawa (Ontario), K1A 0T6 ou communiquez avec le Centre régional de consultation de Statistique Canada le plus près de chez vous (voir la liste dans cette publication).
